Input
RGB image
resized to
1024 (or 512)
TinyViT encoder
frozen, 6.07 M parameters
conv stage + 10 blocks
+ adapter per block (0.20 M)
SAM mask decoder
two-way transformer,
4x upsampling
3.51 M, trained
Learned prompts
4 tokens + dense prompt
replace user clicks
Output
camouflage map,
sigmoid, resized
to original size
Training (Ours):
clean + corrupted view
(seen corruptions only)
structure loss on both
+ consistency (MSE,
clean = fixed target)
trained (3.71 M)
frozen (6.62 M)
